

MILGO/BUFKIN **COLUMN COVERS** are available in a number of different sizes, shape configurations and detailing options. All **COLUMN COVERS** are pre-engineered for maximum aesthetic appeal while allowing for ease of installation. **COLUMN COVERS** can be used to disguise building services or to accentuate building structure. MILGO/BUFKIN offers a full range of **COLUMN COVERS**, from economical field paintable enclosures to fluted mirror polished bronze architectural statements.

COLUMNS

CC-A COLUMN COVER ALPHA SERIES™

Guide Specification

Preformed aluminum **COLUMN COVERS** shall be ALPHA SERIES™ CC-A as manufactured by MILGO/BUFKIN. The formed metal sections shall be supplied with a tapered fin, punched with staggered holes for screw attachment to supplied metal studs. Metal surfaces are to be supplied shop primed ready for finishing with a corrosion-inhibiting coating compatible with materials commonly used in interior construction. All joints are to be taped, floated and sanded smooth prior to final finishing. (It is recommended that self-adhesive fiberglass scrim tape be used.) MILGO/BUFKIN as manufacturer reserves the right to change and modify the design and manufacture of components as part of its ongoing product improvement programs.

Physical Properties

Finish.....	Paint Ready

Installation Detail

COLUMN COVERS-ALPHA SERIES™ CC-A are formed metal column enclosures in any diameter (6" minimum to an unlimited maximum) or shape configuration (circles, ovals, ellipses, squares and rectangles). ALPHA SERIES™ **COLUMN COVERS** are an economical, damage resistant solution to providing a monolithic column enclosure. Factory modified edges can be supplied to accommodate partial columns. Horizontal stacking joints (*) may be supplied for heights over 12 feet unless otherwise requested.

For Ordering

Specify **COLUMN COVERS** by method below.

CC 1.0

MILGO/BUFKIN **COLUMN COVERS** are available in a number of different sizes, shape configurations and detailing options. All **COLUMN COVERS** are pre-engineered for maximum aesthetic appeal while allowing for ease of installation. **COLUMN COVERS** can be used to disguise building services or to accentuate building structure. MILGO/BUFKIN offers a full range of **COLUMN COVERS**; from economical field paintable enclosures to fluted mirror polished bronze architectural statements.

COLUMNS

CC-B

COLUMN COVER BETA SERIES™

Guide Specification

Preformed **COLUMN COVERS** shall be BETA SERIES™ CC-B as manufactured by MILGO/BUFKIN. The formed metal **COLUMN COVERS** shall be supplied in the sizes, configurations, materials and finishes as the drawings indicate (aluminum, bronze, steel, stainless steel, composites, mirror or satin polished, photoetched, state of the art coatings, sandblasted). Internal support studs with attachment shoes are to be supplied to facilitate installation and attachment to the building structure. Concealed fastening shall be provided when indicated by means of a positive interlock, twelve inches on center along the vertical seams. **COLUMN COVERS** can be supplied in 20 feet lengths without horizontal joints (material sheet limitations will apply). MILGO/BUFKIN as manufacturer reserves the right to change and modify the design and manufacture of components as part of its ongoing product improvement programs.

Installation Detail

COLUMN COVERS-BETA SERIES™ CC-B are formed metal column enclosures available in any diameter (4" minimum to an unlimited maximum) or shape configuration (circles, ovals, ellipses, squares and rectangles). BETA SERIES™ **COLUMN COVERS** are a solution to providing a highly finished monolithic column enclosure. Factory modified edges can be supplied to accommodate partial columns. Horizontal stacking joints (*) may be supplied for heights over 12 feet unless otherwise requested.

For Ordering

Specify **COLUMN COVERS** by method below.

DDLS

DOUBLE LEG STEP REVERSE

Guide Specification

Double Leg Step - Reverse shall be **DETAILS** DDLS-R as manufactured and supplied by MILGO/BUFKIN. The formed metal sections shall incorporate an integral offset, punched with staggered holes for screw attachment to conventionally installed gypsum drywall. To insure proper installation, screws must engage with the wood or metal stud sub-structure. Metal surfaces are to be supplied shop primed ready for finishing with a corrosion-inhibiting coating compatible with materials commonly used in interior construction. All joints are to be taped, floated and sanded smooth prior to final finishing. (It is recommended that self-adhesive fiberglass scrim tape be used.) MILGO/BUFKIN as manufacturer reserves the right to change and modify the design and manufacture of **DETAILS** components as part of its ongoing product improvement programs.

The formed metal sections shall incorporate an integral offset, punched with staggered holes for screw attachment to conventionally installed gypsum drywall. To insure proper installation, screws must engage with the wood or metal stud sub-structure. Metal surfaces are to be supplied shop primed ready for finishing with a corrosion-inhibiting coating compatible with materials commonly used in interior construction. All joints are to be taped, floated and sanded smooth prior to final finishing. (It is recommended that self-adhesive fiberglass scrim tape be used.) MILGO/BUFKIN as manufacturer reserves the right to change and modify the design and manufacture of **DETAILS** components as part of its ongoing product improvement programs.

RC 1.0

DETAILS the definitive solution to detailing and installation/execution problems. A full line of standard metal components for the drywall and acoustical trade. All **DETAILS** components are available in standard lengths of 96", 120", 144" plus or minus 1/16". Custom shapes and sizes are also available. Factory prepared joints are recommended when installed lengths require butting of **DETAILS** components. Pre-mitered and assembled corners and intersections are also available. Please contact our nearest representative for further information.

DETAILS™

DLIR

LARGE INSIDE RADIUS CORNERS TANGENT FIN

Guide Specification

Large Inside Radius Corners-Tangent Fins shall be **DETAILS** DLIR-T as manufactured by MILGO/BUFKIN. The formed metal sections shall incorporate an integral offset, punched with staggered holes for screw attachment to conventionally installed gypsum drywall. To insure proper installation, screws must engage with the wood or metal stud sub-structure. Metal surfaces are to be supplied shop primed ready for finishing with a corrosion-inhibiting coating compatible with materials commonly used in interior construction. All joints are to be taped, floated and sanded smooth prior to final finishing. (It is recommended that self-adhesive fiberglass scrim tape be used.) MILGO/BUFKIN as manufacturer reserves the right to change and modify the design and manufacture of **DETAILS** components as part of its ongoing product improvement programs.

Physical Properties

Material.....	Aluminum
Fire Rating (NFPA No. 101).....	Class A
Flame Spread.....	0
Smoke Developed.....	0
Fuel Contributed.....	0
Finish.....	Paint Ready

Installation Detail

DETAILS Large Inside Radius Corners DLIR-T, produce flowing curved 90 degree corners. Available in any required radius from a 4" minimum to an unlimited maximum in any dimensional increment. DLIR-Ts are easily installed either vertically or horizontally. The taped fins can also be formed to suit individual requirements. For use with conventional metal or wood studs and 1/2" or 5/8" gypsum drywall board construction. To insure proper installation, screws attaching **DETAILS** components must engage with the stud substructure.

All **DETAILS** components are available in standard lengths of 96", 120", 144" plus or minus 1/16". Custom shapes and sizes are also available. Factory prepared joints are recommended when installed lengths require butting of **DETAILS** components. Pre-mitered and assembled corners and intersections are also available. Please contact our nearest representative for further information.

DETAILS™

DLORP LARGE OUTSIDE RADIUS POCKET TANGENT FIN

Guide Specification

Large Outside Radius Pocket-Tangent Fin shall be **DETAILS** DLORP-T as manufactured by MILGO/BUFKIN. The formed metal sections shall incorporate an integral offset, punched with staggered holes for screw attachment to conventionally installed gypsum drywall. To insure proper installation, screws must engage with the wood or metal stud sub-structure. Metal surfaces are to be supplied shop primed ready for finishing with a corrosion-inhibiting coating compatible with materials commonly used in interior construction. All joints are to be taped, floated and sanded smooth prior to final finishing. (It is recommended that self-adhesive fiberglass scrim tape be used.) MILGO/BUFKIN as manufacturer reserves the right to change and modify the design and manufacture of **DETAILS** components as part of its ongoing product improvement programs.

Physical Properties

Material.....	Aluminum
Fire Rating (NFPA No. 101).....	Class A
Flame Spread.....	0
Smoke Developed.....	0
Fuel Contributed.....	0
Finish.....	Paint Ready

Installation Detail

DETAILS Large Outside Radius Pockets DLORP-T are available in any radius specified from a minimum of 4" to an unlimited maximum in any increment. A light pocket can be produced when the DLORP-T is attached to a soffit with its integral mounting brackets. Factory premitered and welded corners are available for ease of field installation. For use with conventional metal or wood studs and 1/2" or 5/8" gypsum drywall board construction. To insure proper installation, screws attaching **DETAILS** components must engage with the stud substructure. External blocking (as illustrated) may be required in retrofit construction.

For Ordering

Specify **DETAILS** components by item number below. Customer must submit exact details of external or internal blocking and the overall dimensions and weight of light fixture; brackets will be supplied to fit.
